## Teacher Notes

This foldable does not include prometaphase. If you want prometaphase included, you will find the other foldable in the zip file that includes prometaphase. There are many different ways that you can have students use the mitosis foldable. I have created a video that shows an example of the foldable at

<https://www.youtube.com/watch?v=AXuPB-Pt4IU>

In addition, I have included some pictures below that show some ways that students can use the foldable. Please let us know if you have any other questions about the foldable!

You can email us at [jen\\_marie\\_18@hotmail.com](mailto:jen_marie_18@hotmail.com).

Thanks again for your purchase!!!

# Option 1

The first option is to have students construct the foldable and use as a handheld study tool.

## Option 2

The second option is to have students glue the foldable into their interactive notebook.

Note - If your students have a really small composition notebook, print the foldable at 90% or you can students fold the side of the foldable.

# Option 3

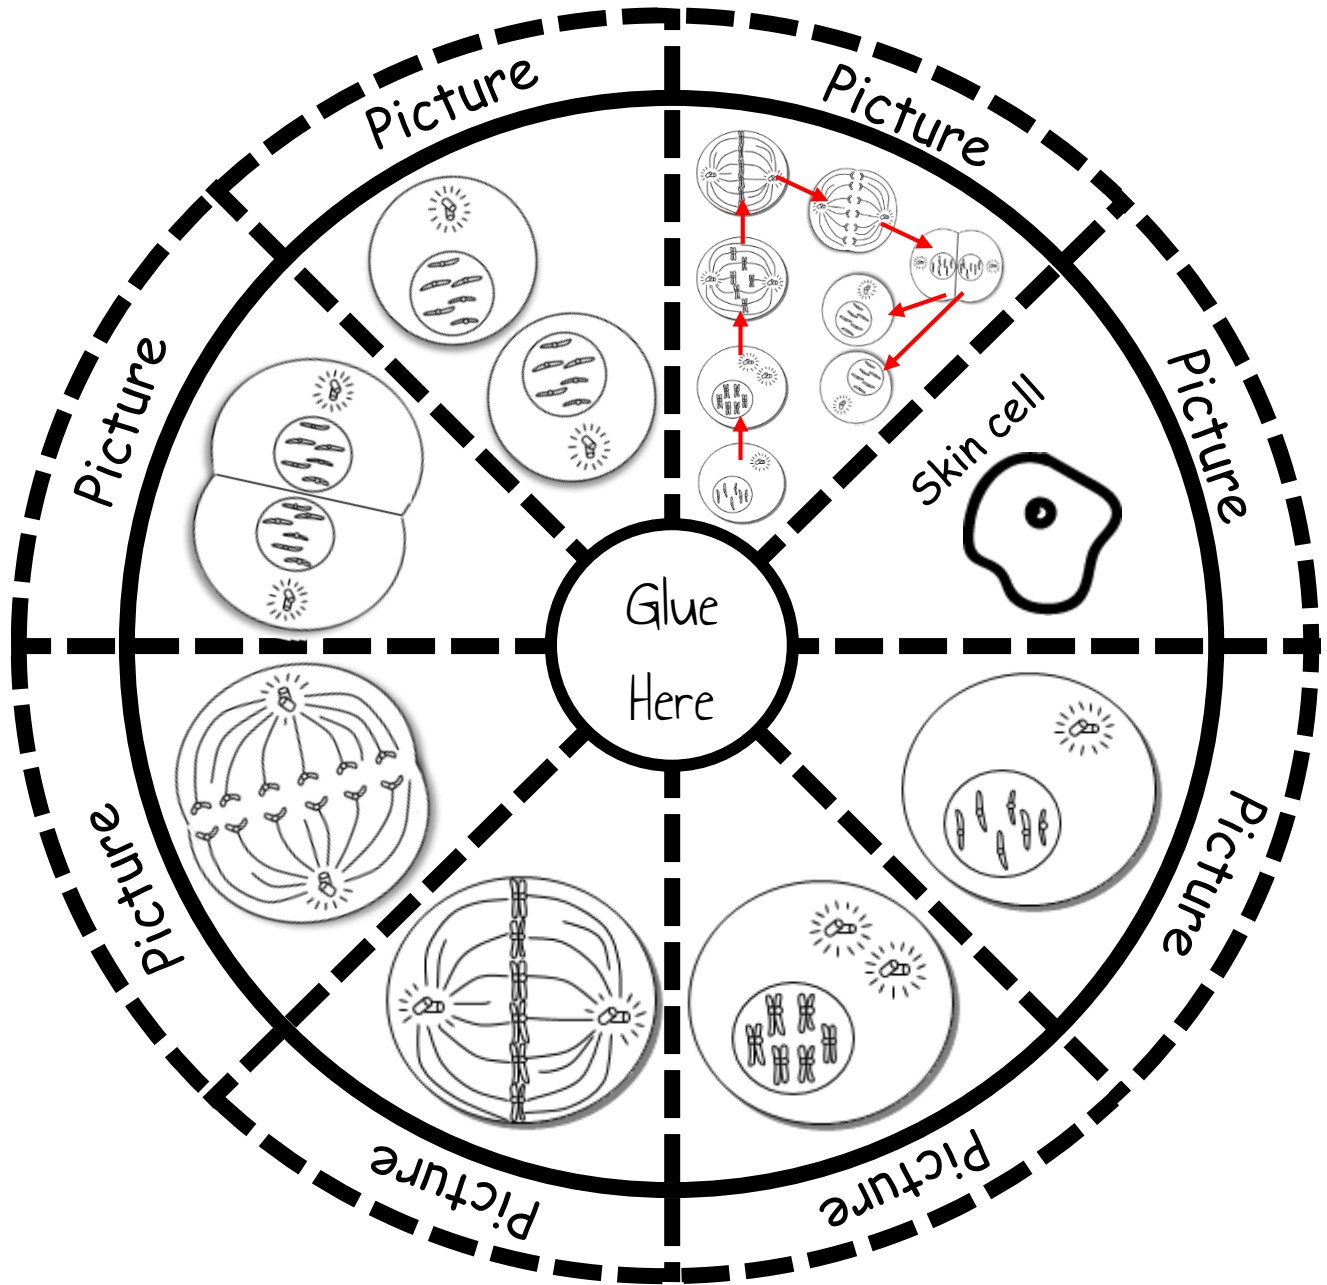

The third option is to have students construct the foldable with a cover. The cover allows them to study the phases in order.

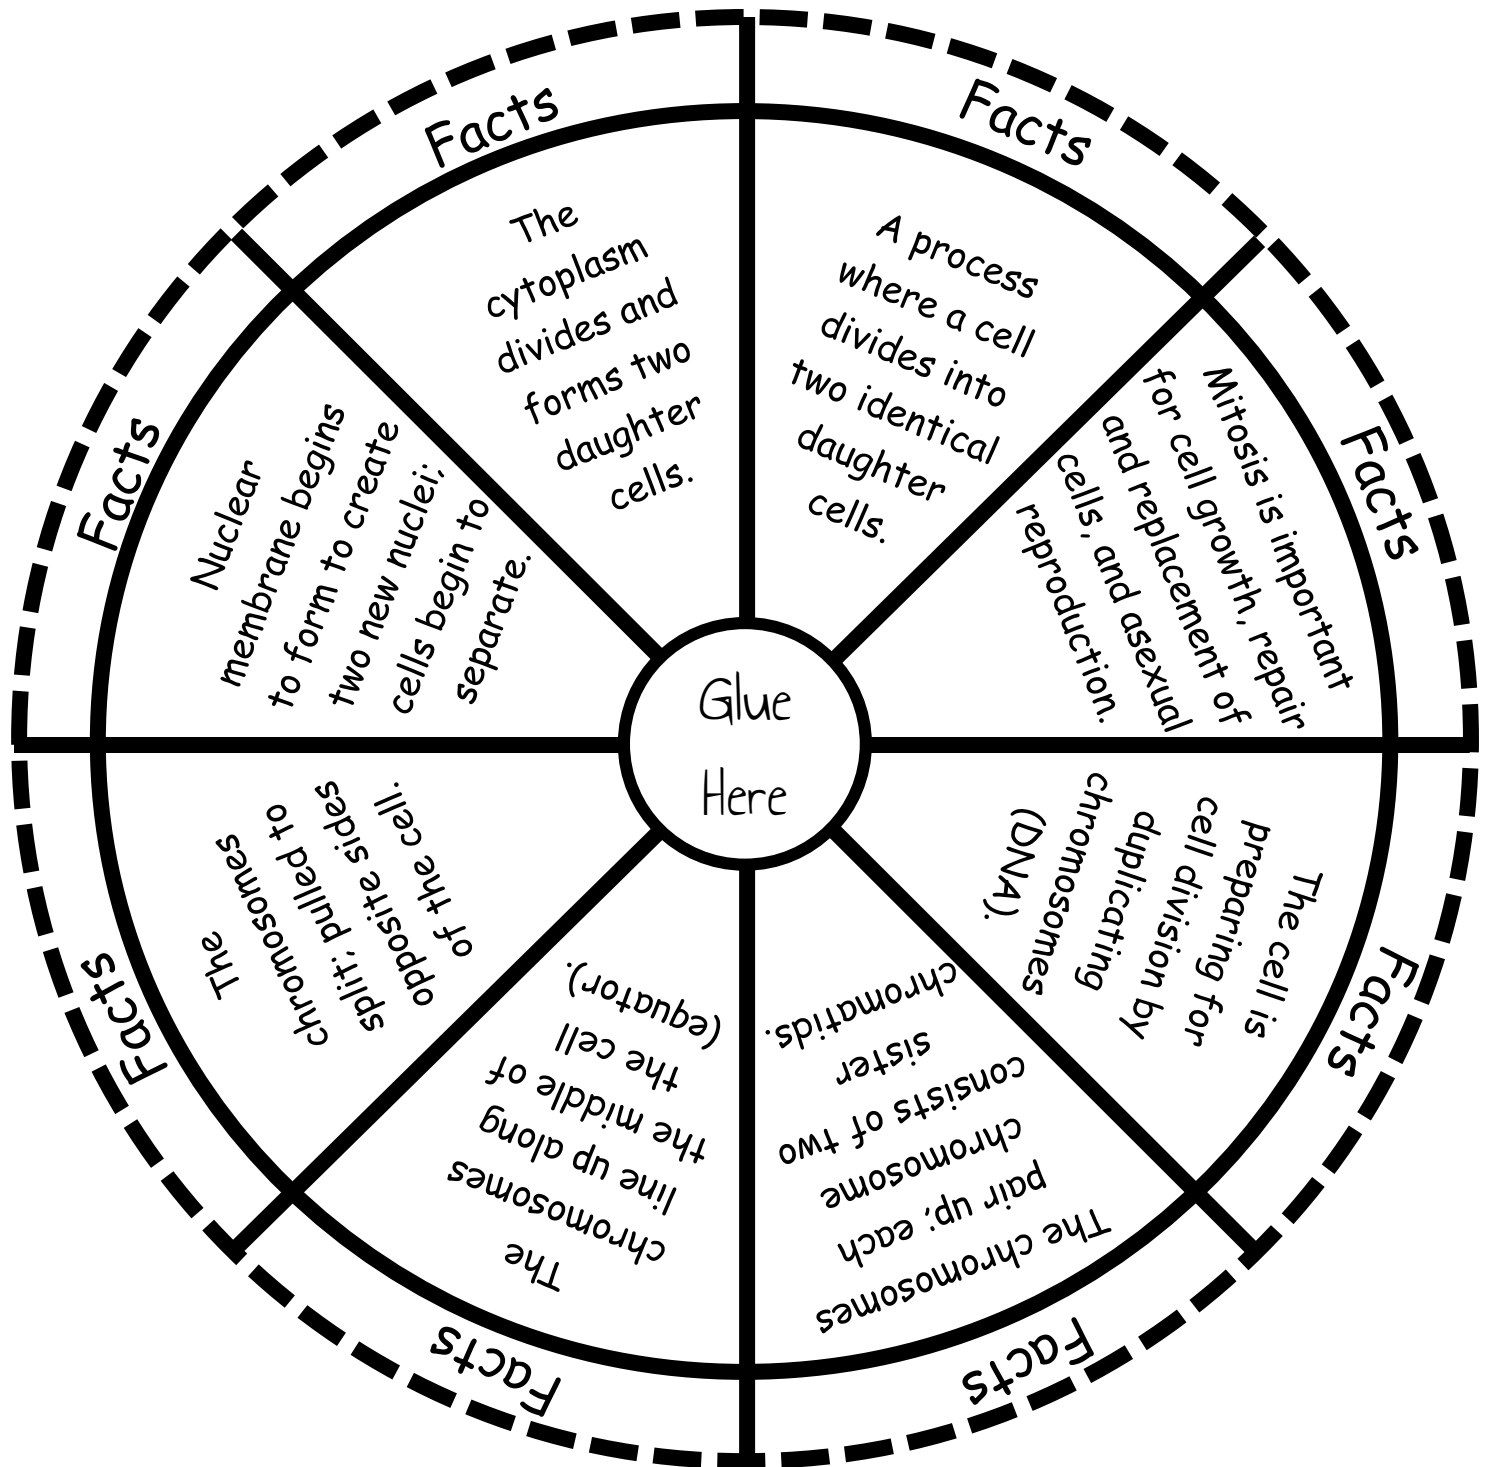

Directions: Color and cut out the circles on page 1 through page 3. Cut the dotted lines between the sections. You will need to glue the wheels together by placing glue on the small circles that say "Glue Here". The biggest circle will be glued on the bottom and the smallest circle will be glued on the top.

**Important Note - Make sure to line up your circles before gluing!** For example, you will want "Interphase" to be glued on top of its picture and facts.

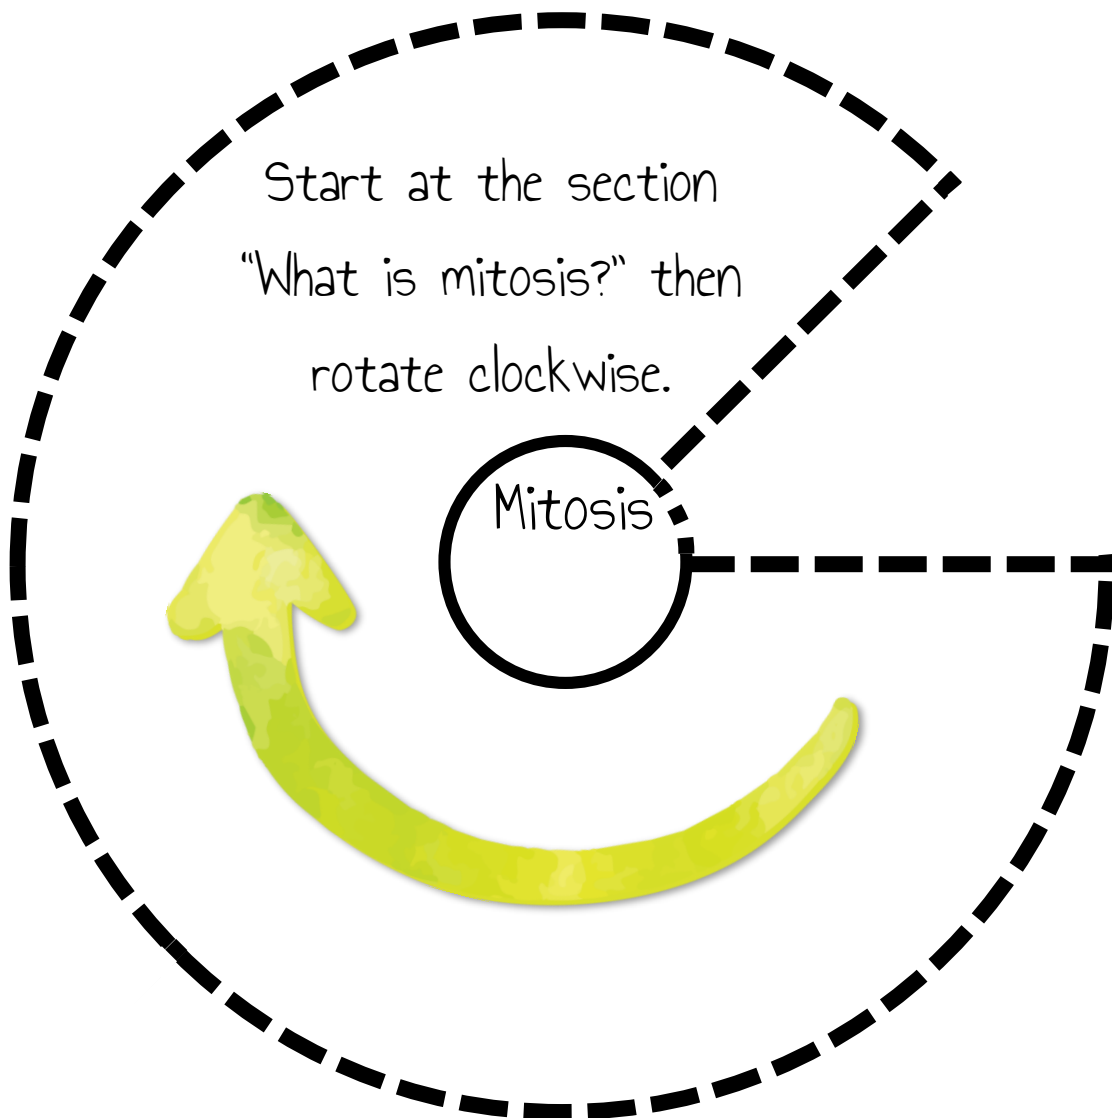

# Cover

The cover given below is optional to use. The cover is a nice way for students to study the order of the phases. In order to use the cover, students will need paper fasteners.

Students will need paper fasteners.

Directions: Cut out on the dotted lines. Place the circle on top of your foldable. Place a paper fastener in the very center of your foldable.
